

On Wednesday, August 24, 2005, LMDC will commence with the approved *Non Intrusive Preparatory Work* previously announced in E-Update #24 on August 8, 2005. The *Non Intrusive Preparatory Work* is defined as work that is necessary for the installation of the scaffolding system that does not in any way penetrate contaminated surfaces, or require any abatement work in order for safe execution. This *Non Intrusive Preparatory Work*, which has been approved by the Regulators, includes the replacement of perimeter sidewalk bridging and fencing, along with the pouring of the south hoist pad, and is anticipated for completion within two weeks. No additional work will occur until LMDC receives approval of the August 8, 2005, Deconstruction Plan, or until LMDC identifies and requests Regulator approval for further *Non Intrusive Preparatory Work* prior to the approved plan.

Background on Non Intrusive Preparatory Work

On July 27, 2005, LMDC requested approval to 1) Install sidewalk bridges and perimeter site fence, 2) Install a concrete pad for the hoist, and 3) Install hanging rigs support frames. LMDC and the Regulators discussed the merits of this request and the Regulators have approved the installation of the sidewalk bridges and the concrete hoist pad, as these tasks pose no threat of disturbing the building, the exterior netting, or any regulated materials. The Regulators denied LMDC's request for the third item pending approval of the completed Deconstruction Plan.
